A Additional Tables and Figures

A.1 Tables

We provide five additional tables showing results for recall@10 referenced in Sections 5.1 (Tables A1), the full results for Table 5 in Section 5.2 and the corresponding results for recall@10 (Tables A2 and A3), the results for general recommenders with temporal LOO omitted from Section 5.3 (Table A4), and the results for general recommenders for recall@10 with split-by-timepoint LOO referenced in Section 5.3 (Table A5).

Table A3: Performance of sequential recommenders with temporal LOO split into active and inactive users in Recall@10. Active users have interactions after the cut-off date used in split-by-timepoint LOO. All other users are inactive.

Table A4: Performance of general recommenders compared to sequential recommenders with temporal LOO. Bold indicates best-performing model overall for a given evaluation metric. Sequential recommenders consistently outperform general recommenders with temporal LOO (under the influence of data leakage, see Table 5).

Table A5: Performance of general recommenders compared to sequential recommenders with split-by-timepoint LOO. Bold indicates best-performing model overall for a given evaluation metric and cells highlighted in grey represent general recommenders that outperform best-performing sequential recommenders. "-" indicates that a model could not be run due to the size of the data set.

A.2 Figures

We present one additional figure showing how the model rankings for sequential recommenders changes between temporal LOO and split-by-timepoint LOO for each data set using recall@10.

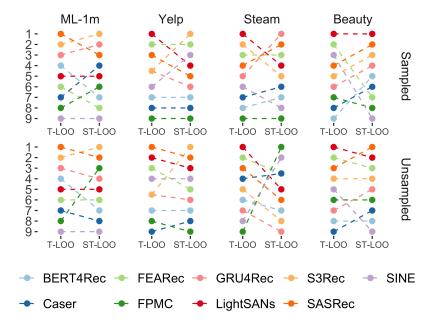

Figure A1: Inconsistent rankings of 9 sequential recommenders obtained with temporal LOO (T-LOO) and split-by-timepoint LOO (ST-LOO) across four datasets. Rankings are obtained based on both popularity-sampled (top) and unsampled (bottom) Recall@10.
